### Intro

Changing joint distribution of household income Consumption, income and imperfect credit markets

• Authors make two points:

・ロト ・回 ト ・ヨト ・ヨト

### • Authors make two points:

Changing joint distribution of household income.

イロン 不同と 不同と 不同と

- Authors make two points:
  - Changing joint distribution of household income.
  - 2 Consumption, income and imperfect credit markets.

- Authors make two points:
  - Changing joint distribution of household income.
  - 2 Consumption, income and imperfect credit markets.
- I will devote a little time to 1 and more to 2.

• Authors do a careful job exploring changes in the distribution of income in the PSID

・ 回 と ・ ヨ と ・ ヨ と

- Authors do a careful job exploring changes in the distribution of income in the PSID
  - variance of income at the *household* level has gone up.

- Authors do a careful job exploring changes in the distribution of income in the PSID
  - variance of income at the *household* level has gone up.
  - 2 covariance of income across *households* has gone *down*.

- Authors do a careful job exploring changes in the distribution of income in the PSID
  - variance of income at the household level has gone up.
  - 2 covariance of income across *households* has gone *down*.
  - variance of income at the aggregate level has gone down.

A (10) × (10) × (10) ×

- Authors do a careful job exploring changes in the distribution of income in the PSID
  - variance of income at the household level has gone up.
  - 2 covariance of income across *households* has gone *down*.
  - variance of income at the aggregate level has gone down.
- Essentially effect 2 more than cancels out effect 1 in the aggregate.

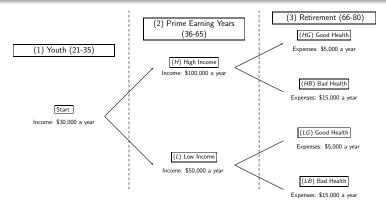

- Authors do a careful job exploring changes in the distribution of income in the PSID
  - variance of income at the household level has gone up.
  - 2 covariance of income across *households* has gone *down*.
  - variance of income at the aggregate level has gone down.
- Essentially effect 2 more than cancels out effect 1 in the aggregate.
- What does this say about financial innovation?

- Authors do a careful job exploring changes in the distribution of income in the PSID
  - variance of income at the *household* level has gone up.
  - 2 covariance of income across *households* has gone *down*.
  - variance of income at the aggregate level has gone down.
- Essentially effect 2 more than cancels out effect 1 in the aggregate.
- What does this say about financial innovation?
  - Nothing on the face of it.

- Authors do a careful job exploring changes in the distribution of income in the PSID
  - variance of income at the household level has gone up.
  - 2 covariance of income across *households* has gone *down*.
  - variance of income at the aggregate level has gone down.
- Essentially effect 2 more than cancels out effect 1 in the aggregate.
- What does this say about financial innovation?
  - Nothing on the face of it.
  - Financial assets intermediate between consumption and income.

# Splitting the sample

Myopia

Financial innovation and the  $\Delta C = \Delta Y$  relationship Problem of omitted variables Splitting the sample

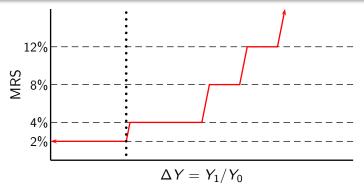

(ロ) (四) (三) (三)

- Credit constraints not only possible explanation
- Myopia
- But credit constraints generate a non-linear relationship

Financial innovation and the  $\Delta C = \Delta Y$  relationship Problem of omitted variables Splitting the sample

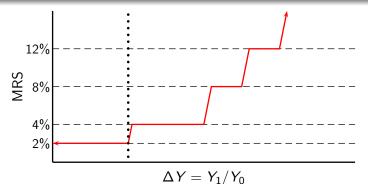

イロト イヨト イヨト イヨト

- Credit constraints not only possible explanation
- Myopia
- But credit constraints generate a non-linear relationship
  - Can test by splitting the sample.

Financial innovation and the  $\Delta C = \Delta Y$  relationship Problem of omitted variables Splitting the sample

<ロ> (日) (日) (日) (日) (日)

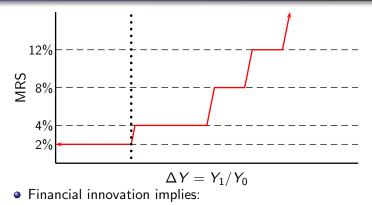

- Credit constraints not only possible explanation
- Myopia
- But credit constraints generate a non-linear relationship
  - Can test by splitting the sample.
  - Typically done at  $\Delta Y = 0$  (arbitrary)

Financial innovation and the  $\Delta C = \Delta Y$  relationship Problem of omitted variables Splitting the sample

æ

- Omitted variables?
- More serious
- Increasing wealth, for example, implies the same thing.
- Households wealthier after 1985 than before

Financial innovation and the  $\Delta C = \Delta Y$  relationship Problem of omitted variables Splitting the sample

- Omitted variables?
- More serious
- Increasing wealth, for example, implies the same thing.
- Households wealthier after 1985 than before
  - 15% higher W/Y according to Flow of Funds.

Changing joint distribution of household income Problem	ial innovation and the $\Delta C = \Delta Y$ relationship m of omitted variables ng the sample
---	--

### Conclusion

・ロト ・回ト ・ヨト ・ヨト

æ

Intro	Financial innovation and the $\Delta C = \Delta Y$ relationship
Changing joint distribution of household income	Problem of omitted variables
Consumption, income and imperfect credit markets	Splitting the sample

# Conclusion

#### • Paper clearly a bit rough right now.

Intro	Financial innovation and the $\Delta C = \Delta Y$ relationship
Changing joint distribution of household income	Problem of omitted variables
Consumption, income and imperfect credit markets	Splitting the sample

### Conclusion

- Paper clearly a bit rough right now.
- But it has the potential to illuminate both the causes and consequences of financial innovation.
