

12th District Banking Profile

Federal Reserve Bank of San Francisco
Banking Supervision & Regulation
December 21, 2012

Overview

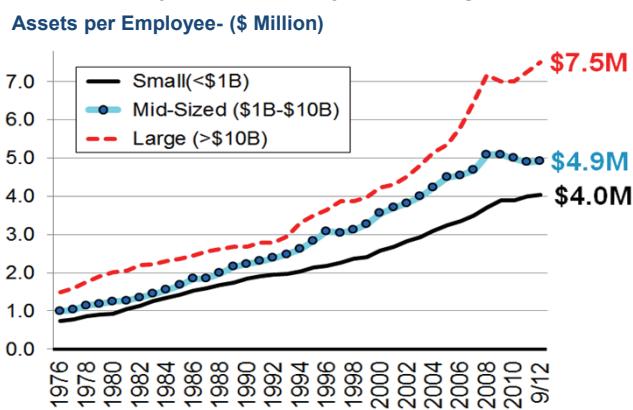

This Profile focuses on a handful of nationwide metrics for three bank size peer groups. The industry has undergone considerable consolidation in the past 35 years, with the number of banks down nearly 60%, yet with assets in aggregate up more than 11 times. Consolidation of banks within the same organization, mergers, and failures were behind the large reduction in charters (for more detail, see FDIC Community Banking Study, Dec. 2012). Over time, banks have emphasized efficiencies with pretty dramatic increases in assets per employee, particularly at the large banks. Trends in noncurrent loan rates reflect the major credit quality cycles over the period. Small banks now have the lowest noncurrent rates; however, they presently are the least profitable with fewer noninterest revenue sources and moderately higher overhead ratios. Banks of all sizes are recovering from the recession. Capital ratios rose strongly over this period, particularly among the large and mid-sized banks.
