TRENDS IN DELINQUENCIES AND FORECLOSURES IN IDAHO

January 2011
National Trends

- Even though NBER officially announced the recession’s end in June of 2009, pace of recovery remains slow
  - Unemployment rate in November rose to 9.8% from 9.6%, demonstrating continued weakness in the labor market
    - On the more positive side, the private sector has been adding jobs each month, and part of the rise in unemployment is due to an increase in the labor force—that is, the number of people who started looking for work
  - Housing is the one major sector of the economy where we still do not see signs of recovery
    - New and existing home sales remain near historic lows, and inventories of foreclosed homes remain very high
  - Public sector budget crisis in many states is of major concern, and threatens viability of services to LMI communities
Unemployment continues to hover around 10%
