And Certain Market Indicators are Looking Up

- Financial markets are improving, and the crisis mode that has characterized the past year is subsiding.

- The housing sector, which has been at the center of the economic and financial crisis, also looks to be stabilizing—albeit, at a very depressed level. Housing starts and new home sales have leveled off, and existing home sales have edged up in recent months.

- Income from the federal fiscal stimulus, as well as some improvement in confidence, has helped stabilize consumer spending. Since consumer spending accounts for two-thirds of all economic activity, this is a key precondition for economic recovery.
Nevertheless, Recession is Likely to Have Long-Lasting Impacts, Especially for Lower-Income Families

- 48 states face significant budget shortfalls, and are cutting public services such as health benefits for children and public education.

- Tightening lending standards will make it more difficult for families and small businesses to access credit: the Federal Reserve’s quarterly Senior Loan Officer Opinion Survey on Bank Lending Practices found that 65 percent reported tightened standards for the fourth quarter of 2008.

- CDFIs are increasingly facing liquidity constraints; their borrowers are in more need of ‘patient’ capital at the same time it is becoming harder to provide it.
