Snapshot

Wildfire Smoke in the Las Vegas Metro Area

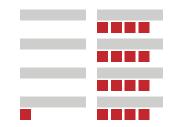

Wildfires have been increasing in frequency, duration, and intensity, measurably affecting communities. Heavy smoke is denser and more likely to be harmful or disruptive. Wildfire smoke can travel thousands of miles, potentially impacting industrial and commercial centers far from fires.

How is wildfire smoke changing?

A "person-day" (one person being under smoke for one day) describes the potential impact of smoke to a region. The annual average person-days of heavy smoke in the Las Vegas metro **increased 2,329**% in 2017-2021, compared to 2011-2015.

The average person in the Las Vegas metro area went from experiencing about 2 days per year of medium smoke overhead to an average of 9 days per year in the second half of the decade.

Possible economic impact of wildfire smoke

Wildfire smoke is more likely to disrupt and harm frontline workers. The Las Vegas region, home to 199,000 frontline workers, experienced more than 1.9 million frontline worker-days of heavy smoke in 2021.

	Utilities, Warehousing & Transportation	Agriculture, Fishing & Mining	Construction	Manufacturing
% of the industry in frontline jobs	00%	65%	76%	52%
frontline workers as % of Las Vegas workforce	6%	<1%	7%	4%
industry's economic output (2020)	\$5B	\$100M	\$9B	\$4B

Prioritizing resilience through the Community Reinvestment Act (CRA)

Communities that experience dramatic increases in disruptive smoke—such as low- and moderate-income and underserved or distressed communities—may be eligible for existing financing programs through the CRA that could help build resilience to smoke-related damages.
